BULLA? OCCIDUA.

Character Genericus.

Animal Limax.
Teſta univalvis, convoluta, inermis.
Apertura coarctata, oblonga, longitudinalis.
Columella obliqua, lævis.

Lin. Syſt. Nat. p. 1181.

Character Specificus, &c.

BULLA? (Helix?) ovato-oblonga, craſſa, albida, ſpira obtuſa, labio purpureo.

HELIX oblonga. H. teſta perforata ovato-oblonga, ſtriata, labro columellaque roſeis.
Müll. Hiſt. Verm. p. 86. *n.* 284.

PSEUDO-AURIS MIDÆ, teſta ovali oblonga, ſubumbilicata, tumida, craſſa, anfractibus ſex ventricoſis, apice obtuſo, labro et labio roſeis, apertura ovata integerrima.
Martini. Vol. 9. p. 30. *t.* 119. *fig.* 1022. 1023.

BUCCINUM admodum craſſum, &c. &c.
Liſt. conch. t. 23. *fig.* 21. *&c.* *t.* 1055. *fig.* 1.

COCHLEA

COCHLEA terreſtris Americana Plumieri.

Liſt. it. Par. p. 74. *t.* 3.

HELIX oblonga.

Born. Muſ. Cæs. Vind. teſt. t. 15. *fig.* 21. 22.

HELIX oblonga.

Lin. Syſt. Nat. Gmel. p. 3637.

COCHLEÆ lævæ.

Seb. Muſ. 3. *t.* 71. *fig.* 17—20.

Facie formaque generali affinis admodum eſt Bulla Occidua perpulchræ Bullæ achatinæ, quam in hoc opere jam depinximus. Ab illa tamen facile dignoſci poſſit, quod craſſior multo ſit, labio non tenui, quale eſt Bullæ achatinæ, ſed circa teſtæ hiatum ſolidam in marginem ducto. Differt quoque colore; nam alba paulatim ſubflavet, labio pulchre roſeo, (quo etiam leviter inficitur interna teſtæ ſuperſicies,) caretque omnino eleganti illa variatione qua decoratur Bulla achatina. Terreſtris eſt ſpecies, et in variis Americæ meridionalis partibus non raro reperitur, nec non in inſulis Americanis ſeu occiduis. Animal teſtam incolens helici communi ſimillimum eſt. Color eſt cinereus, umbris ſtriiſque huc illuc obſcurioribus et lucidioribus variatus, et in aliquibus partibus ſub-cæruleo et roſeo commiſtus. Viro celeberrimo Carolo Plumiero, quem circiter finem ſæculi jam elapſi merito inſigniverunt ſcripta

ſcripta quæ congeſſit de naturali novi orbis hiſtoria, de botanice præcipue, figuram archetypam debemus, quam in tabula imitati ſumus, quamque cum Liſtero in Luteſia Pariſiorum agente, communicavit Plumierus. Ova quæ deponit Bulla occidua putamine calcario conteguntur, et tum forma tum magnitudine ad ovorum paſſeris vulgaris ſimilitudinem tam prope dicuntur accedere, ut ab iis vix ac ne vix poſſint diſtingui.

THE

OCCIDENTAL BULLA.

GENERIC CHARACTER.

Animal reſembling a Limax or Slug.

Shell univalve, convoluted.

Aperture ſomewhat ſtraitened, oblong, longitudinal, entire at the baſe.

Column oblique and ſmooth.

SPECIFIC CHARACTER, &c.

Ovate-oblong thick BULLA? (Helix?) with obtuſe ſpire, and purple lip.

The Roſe-lipped SNAIL.

Roſe-mouthed BULLA.

Surinam SNAIL.

Oviparous SNAIL.
